

Product Brochure

Window Control

Over **20 years experience**
in the window control
industry to give you the
peace of mind you're
getting the right products

Contents

We pride ourselves on using only the best window control products on the market. See our range of products and services to discover more.

08

Actuators

Our range of actuators include chain, linear and folding arm type. The most suitable will depend on the window type.

22

Controls

Several types of controls are available including handheld remotes, switches, thermostats, rain sensors and BMS.

34

Manual

A low cost modular system suited to almost any window type to give a 250mm or 380mm opening.

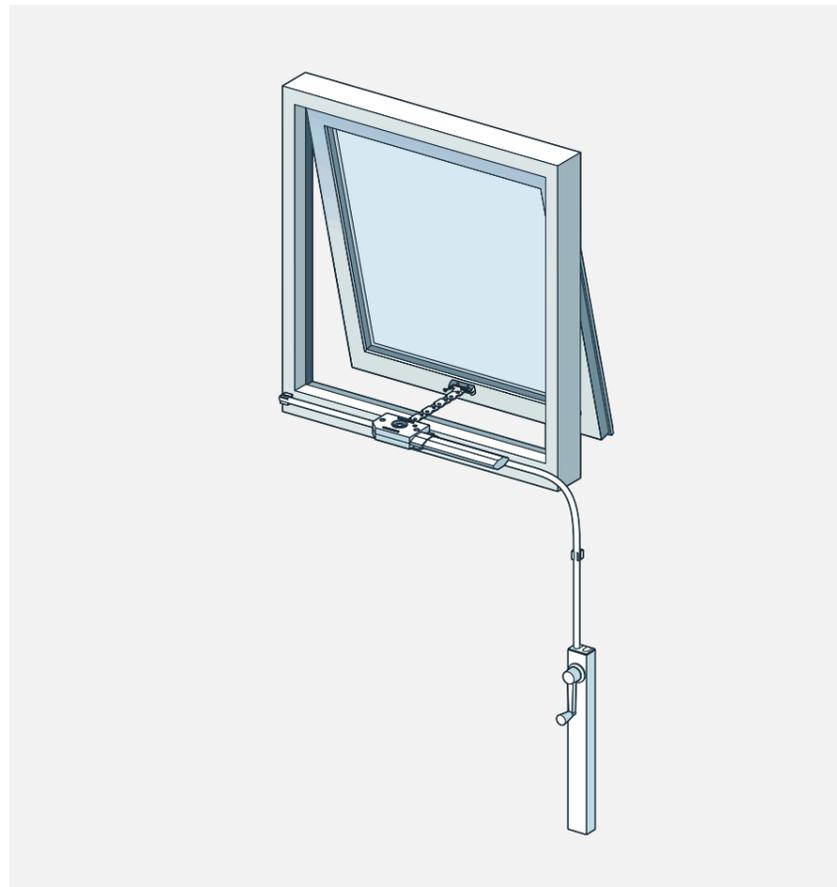

46

Case Studies

Over the years we have had the privilege of working on numerous window control projects. Here are just a few of them.

System Types

Using windows and/or rooflights to naturally ventilate your building can improve the indoor air quality, reduce carbon emissions and improve your learning or working environment.

Manual Window Control

The system designed to operate high level windows or rooflights from an easy to reach location. The system is modular allowing it to be used on almost any window size, style or material.

See page
36

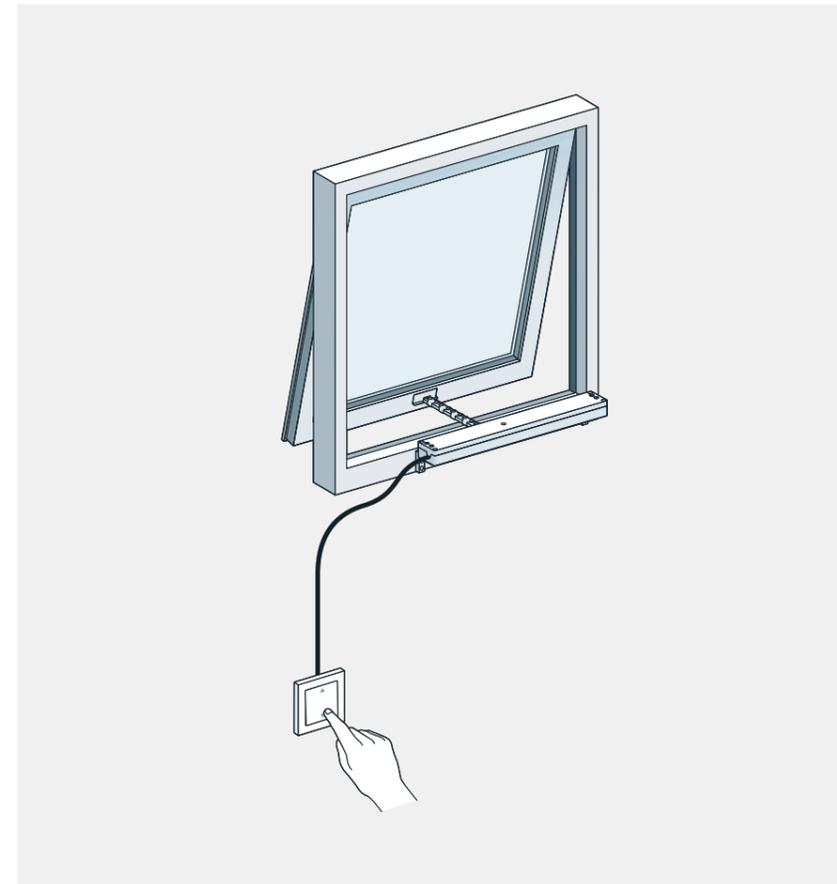

Opener

Fixed to the outer frame of the opening vent. When cable is driven through the unit the opener will push to open or pull to close the opening vent.

Operator

Used to wind inner cable through conduit. The handle can be turned one way to Open the window or turned the other way to Close.

Electric Window Control

Similar to a manual system but with a lot more features including larger opening strokes, higher push forces and automatic control features.

See page
8

Actuator

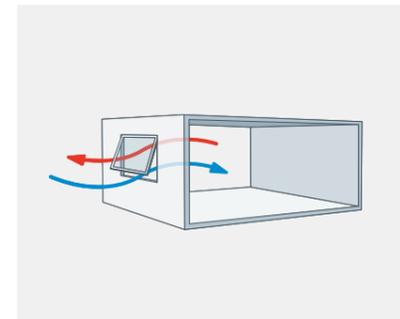

Fixed to the outer frame of the opening vent. When powered the opener will push to open or pull to close the opening vent.

Control

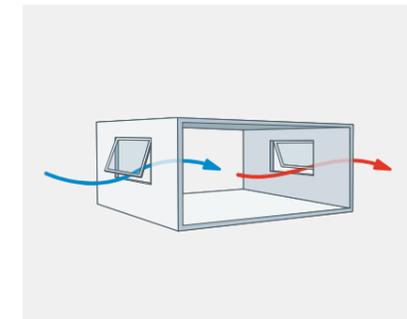

Several types of controls are available including handheld remotes, switches, thermostats, rain sensors and BMS.

Principles

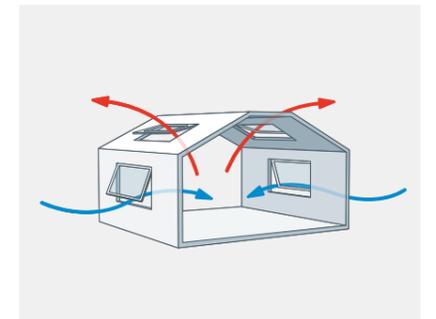

Single Ventilation

Opening vents to one side of the room will provide a basic ventilation system.

Cross Ventilation

Opening vents on two or more sides to create cross ventilation.

Upflow Ventilation

A mixture of vertical and flat/pitched roof vents to create upflow ventilation.

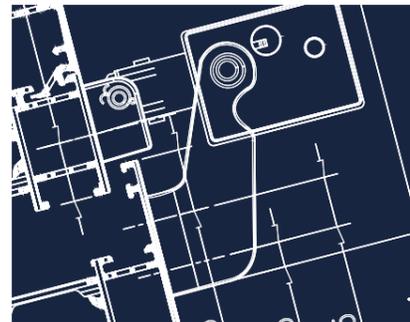

Actuators

System Overview

There are several factors to consider when selecting the correct actuator for your window including hinge type, profile, weight, size, opening requirement and colour.

Profile

Ensure the correct fixing brackets are selected to fix the actuator to the window profile. CAD drawings are available upon request.

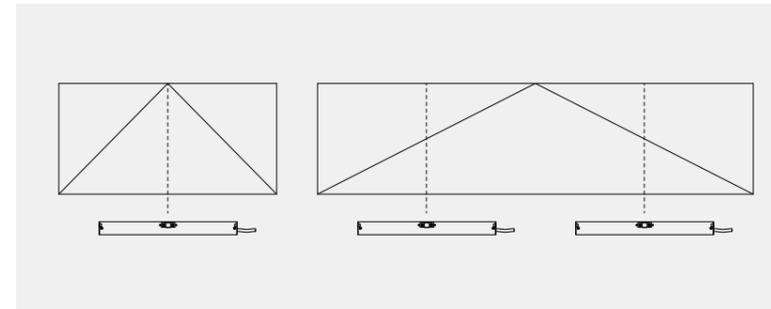

Colour

Most of actuators are available in standard white, black or silver finish. A specific RAL colour and finish can also be provided to suit your project.

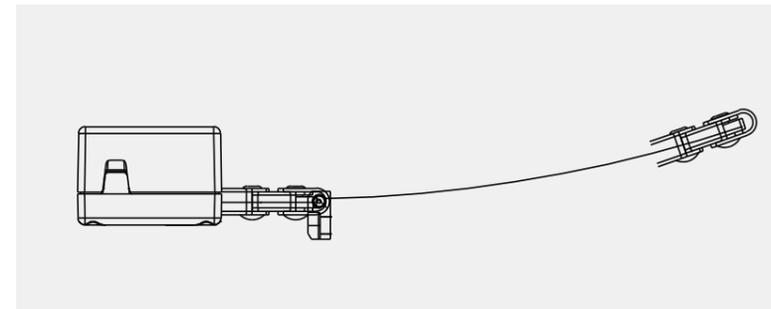

Hinge Type

Electric chain actuators are suitable for almost any window type including top-hung, bottom-hung, side-hung, centre-pivot and parallel openers.

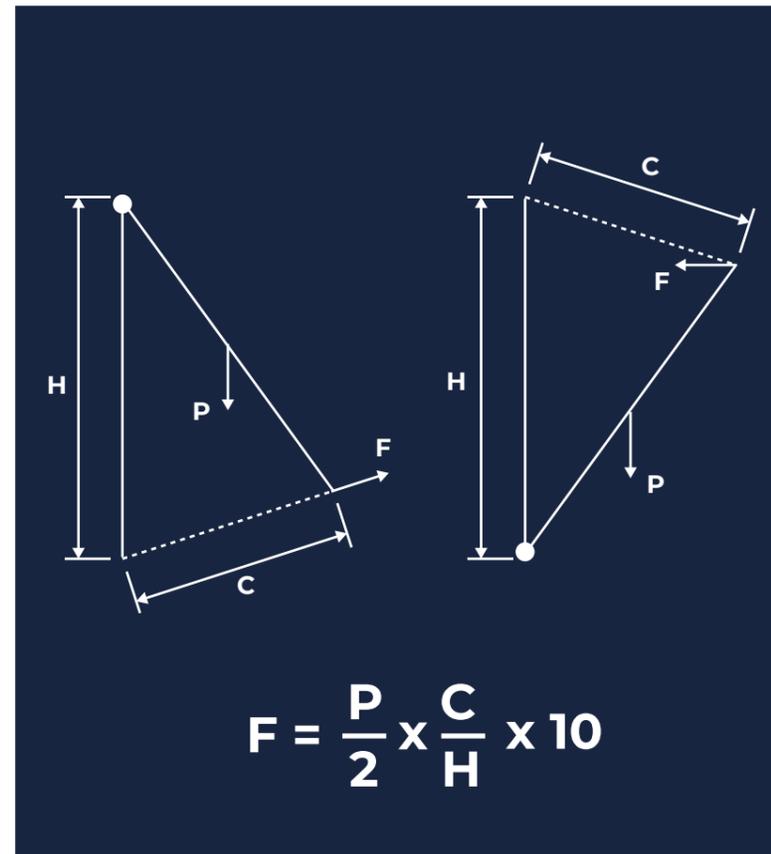

Push Points

For a single push-point/actuator the recommended maximum window width for any actuator is 1300mm. For anything wider it is recommended multiple push points/actuators are used to ensure safer operation and better compression.

Opening Stroke

Typically a 200-300mm opening stroke is sufficient to provide the required natural ventilation however in some instances a larger opening stroke may be required.

Push Force

Calculate the push force required to open the window using the following formula:

$$F = (0.5 \times P) \times (C / H) \times 10$$

P = Window sash weight (kg)

C = Window opening stroke (mm)

H = Window height (mm)

MICRO EVO1

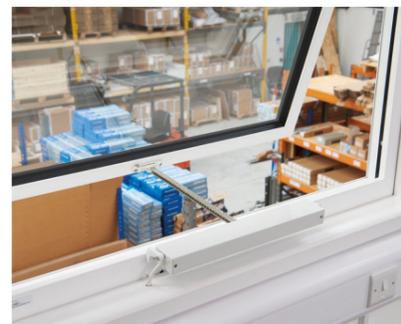

Micro Evo1 electric actuator with anti corrosion treated double-link chain. Self adjusting end limit and soft stop closing to preserve the window frame and actuator.

Stroke	100-200-300-400mm*
Push Force	300N
Voltage	230V AC / 24V DC

*Adjustable

MINGARDI
THE REFERENCE FOR WINDOW AUTOMATION

Adjustable Opening Stroke

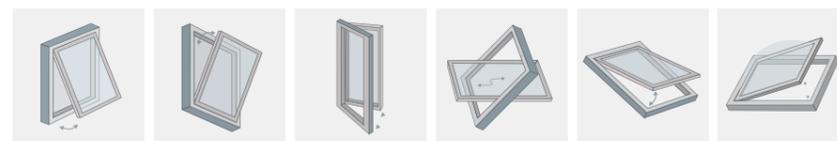

Turn the dial on the side of the actuator to adjust the maximum opening stroke setting. The stroke can be set at 100, 200, 300 or 400mm. No additional programming devices are needed.

Synchronisation

Built-in synchronisation feature allows 2, 3 or 4 actuators to work in tandem on the same opening vent. No additional controls are required for this feature.

Dimensions	668 x 47 x 34mm

Controls

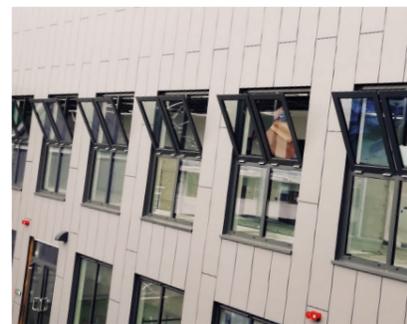

System Overview

There are several factors to consider when selecting the correct control system for your project including motor output, motor load, motor lines, application and inputs.

Overview

A basic system will have a control unit, an input and an output. The input can be a simple switch or an automatic climate sensor. The output will be a 230V or 24V actuator.

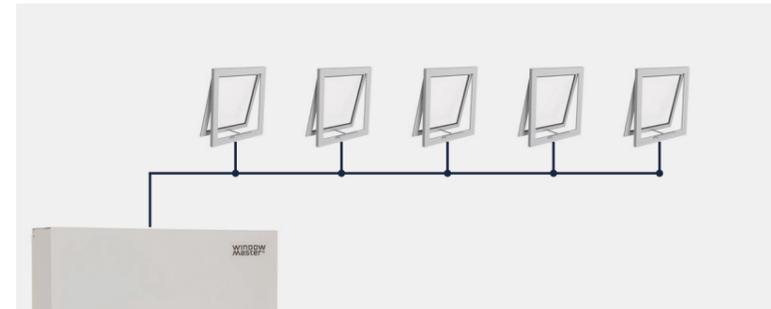

Motor Output

Our range of actuators are available in 230V or 24V. A control unit with the appropriate motor output will need to be selected to ensure the actuator receives the correct voltage.

Motor Lines

A basic control unit will only have a single motor line to power the connected actuator(s). For more advanced systems with zone controls multiple motor lines will be needed.

Motor Load

Ensure the control unit is capable of powering the total number of actuators connected to it. Each actuator will have a current consumption rating (A), make sure this does not exceed the control unit motor load rating (A).

Application

Our controls can be used in a variety of applications. The two main applications are Natural Ventilation and Smoke Ventilation. Smoke Ventilation controls require additional features such as battery backup and EN12101-10 certification.

Inputs

Consider the available number of inputs on the control unit for your application. The project may require the window(s) and roof vent(s) to automate based on temperature, CO2, rain and wind sensor readings - therefore choose the correct control unit to suit.

Need Help?

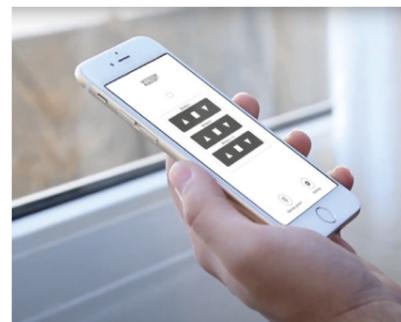

Speak to one of our friendly experts:

01242 620318

WCC 103/106BT

The MotorController controls (opens/closes) the window actuators based on a signal from the included remote control or the connected component(s) e.g. room sensors and weather sensors.

Motor Output	24V DC
Motor Lines	1/2
Motor Load	3 Amp / 6 Amp

App Control

The WCC 103/106BT is supplied complete with a handheld remote. The control unit can be paired with a smartphone for app control.

24V DC Motor Output

The WCC 103/106BT control unit has a 24V DC motor output. Two versions are available; WCC 103BT has a 3 Amp max. motor load and the WCC 106BT with 6 Amp max. motor load.

Application

Natural Ventilation

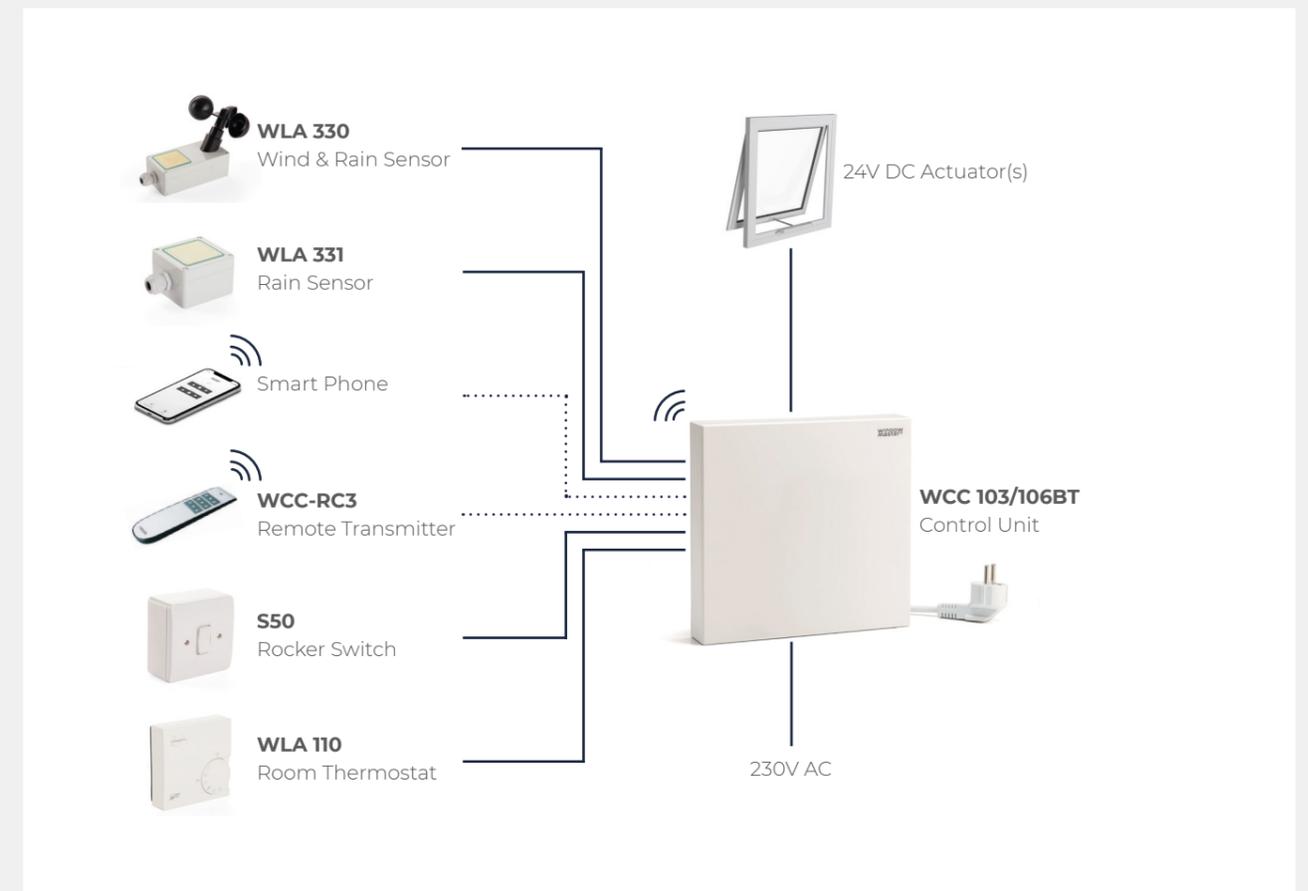

Part Codes

WCC103BT	WCC 103BT Control Unit 24V 3 Amp
WCC106BT	WCC 106BT Control Unit 24V 6 Amp

Technical Data

Primary Voltage (Input)	230V AC
Secondary Voltage (Output)	24V DC
Motor Load	3 Amp (WCC 103BT) / 6 Amp (WCC 106BT)
Motor Lines	1 (WCC 103BT) / 2 (WCC 106BT)
Inputs For	Switch, Key-Switch, Rain Sensor, Wind & Rain Sensor, Thermostat, Timer
Operating Condition	-5°C - +45°C, max
Dimensions	215mm (w) x 206 (h) x 37mm (d)
Protection Type	IP20
Delivery	1 x Control Unit, 1 x Remote, 1 x UK Plug Adapter

Connection Possibilities

Motor Output	24V DC
Motor Lines	2 / 6 / 10
Motor Load	10 Amp / 20 Amp

Products / Controls / Control Units

WCC 310/320PLUS

The MotorController controls (opens/closes) the window actuators based on the signals from the connected components e.g. keypads, room sensor, weather sensor and BUS commands.

Touch Screen

Easy-to-use LCD touch screen makes the panel easy to configure, commission and maintain – without the need of a PC. System errors are described on screen to facilitate troubleshooting and initialisation.

BMS Communication

The WCC 310/320PLUS can be expanded with a communication card (fieldbus card) thus daily comfort ventilation will be possible via bus communication KNX, BACnet IP MS/TP or Modbus TCP/RTU/RS485.

Application

Natural Ventilation

Inputs For	Remote Transmitter, Wireless Switch and Wireless Timer
Operating Condition	-20°C - +60°C
Dimensions	110mm (w) x 110 (h) x 40mm (d)
Protection Type	IP55
Delivery	1 x Control Unit, 1 x Remote

Connection Possibilities

EVC

The EVC Control Unit is used to automatically ventilate the indoor environment. The connected window actuator(s) open or close according to the internal and external temperatures. The rain and wind sensors ensure the connected actuator(s) close during rain and/or high wind speeds.

Motor Output	230V AC
Motor Lines	1
Motor Load	4 Amp

Remote Control

It is possible to pair a handheld remote (EVC-RC8) to the EVC weather station. Allowing the user to manually operate the connected actuator(s).

230V AC Motor Output

The EVC control unit has a 230V AC motor output with a maximum motor load of 4 Amp.

Application

Natural Ventilation

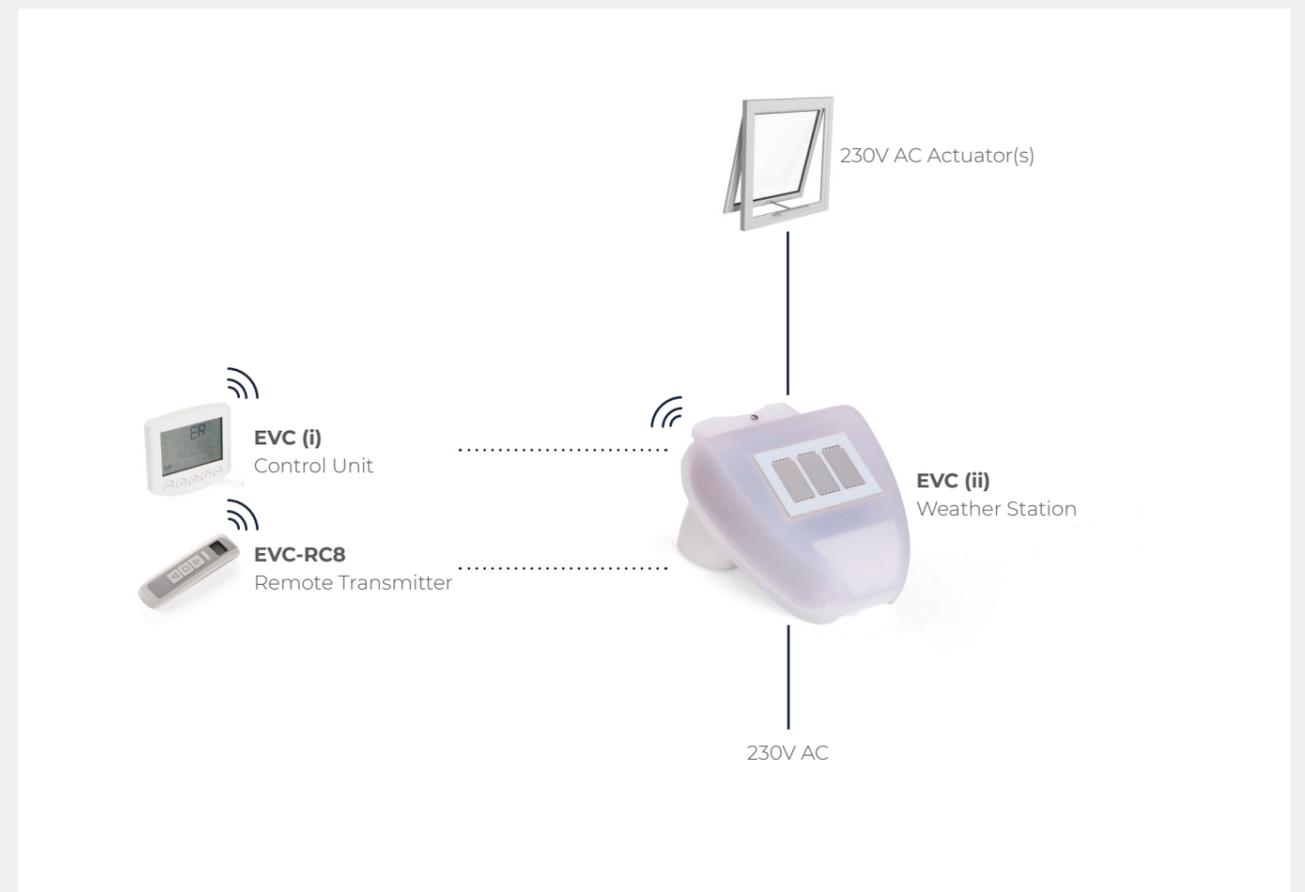

Part Codes

Inputs For	Rain Sensor (built in), Wind Sensor (built in), Temperature Sensor (built in) & Remote
Operating Condition	-10°C - +50°C, max
Dimensions	96 x 77 x 118mm (Weather Station) / 103 x 98 x 28mm (Control Unit)
Protection Type	IP44 (Weather Station) / IP40 (Control Unit)
Delivery	1 x Control Unit, 1 x Weather Station

Connection Possibilities

Accessories

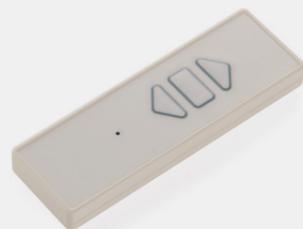

We have a large range of control accessories including rain sensors, wind sensors, thermostats, CO2 sensors, remotes and switches.

RCU1-TIMER Wireless Timer

RCU1-RC1 Remote Transmitter

RCU1-SWITCH Wireless Switch

WLA 331 Rain Sensor

WLA 330 Wind & Rain Sensor

S50 Rocker Switch

EVC-RC8 Remote Transmitter

RRTKEY Key Switch

WLA 110 Thermostat

WCC-RC3 Remote Transmitter

WSK100 Keypad

CTS2 CO2 Sensor

Manual

System Overview

There are several factors to consider when selecting the correct manual system for your window including hinge type, profile, weight, size, opening requirement and colour.

Profile

Ensure the correct fixing brackets are selected to fix the opener the window profile. CAD drawings are available upon request.

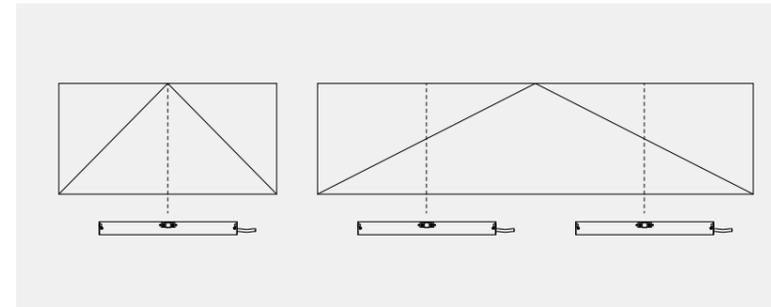

Colour

All parts are available in black, grey, white or anthracite finish as standard.

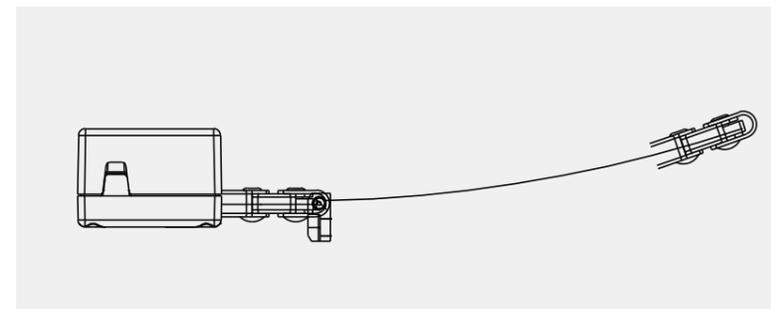

Hinge Type

Manual Chain Openers are suitable for almost any window type including top-hung, bottom-hung and side-hung. Locking Openers are used for bottom-hung windows only.

Push Points

For a single push-point/opener the recommended maximum window width for any 1000mm. For anything wider it is recommended multiple push points/openers are used to ensure safer operation and better compression.

Opening Stroke

Openers are available with a 250mm or 380mm opening stroke. You will need to consider the maximum opening of the window when selecting the correct opening stroke.

$$F = \frac{P}{2} \times \frac{C}{H} \times 10$$

Push Force

Calculate the push force required to open the window using the following formula:

$$F = (0.5 \times P) \times (C / H) \times 10$$

P = Window sash weight (kg)

C = Window opening stroke (mm)

H = Window height (mm)

T100/T150

Manual Chain Opener used to drive open or close a high level or hard to reach window. Can be fitted to most window types - aluminium, timber or uPVC. Individual or multiple chain openers can be controlled from a single operator.

Flexibility

The T100/T150 chain opener is compatible with almost any window style when used with the correct fixing brackets. Speak to our friendly experts to help find the right bracket for your project.

Operators

Several types of operators are available. The T100 is compatible with the T210, T250 and T300 operator. The T150 is compatible with the T260 operator.

highline®

Inward Opening Windows

The T175 locking opener is a great alternative the T100 chain opener when there is limited fixing space available. Speak to our friendly experts to help find the opener for your project.

Operators

Several types of operators are available. The T175 is compatible with the T210, T250 and T300 operator.

Window Types

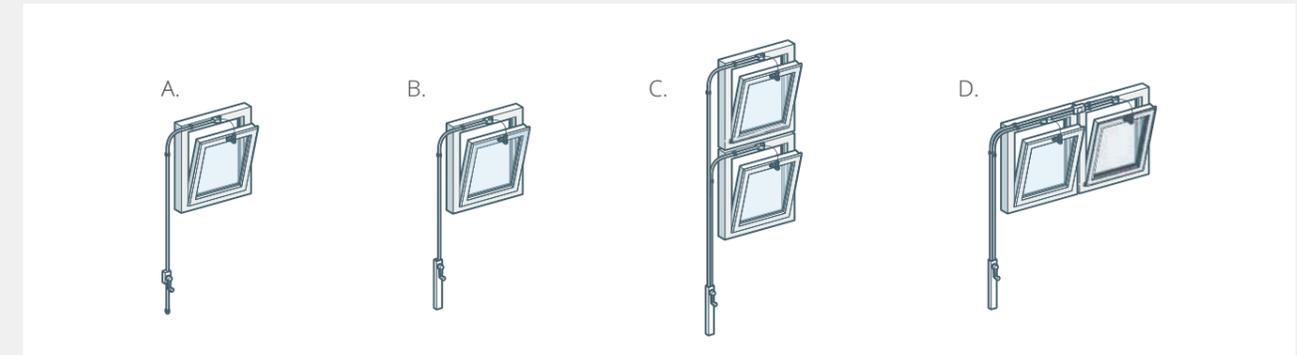

Part Codes

T175B	T175 Locking Opener 250mm Black
T175G	T175 Locking Opener 250mm Grey
T175W	T175 Locking Opener 250mm White

Technical Data

Opening Stroke	250mm
Colour	Black RAL 9005 / Grey RAL 9006 / White RAL 9010
Delivery Includes	1 x Locking Opener
Min. Window Width	> 50mm
Max. Window Width	< 1000mm (use multiple openers if wider)

Examples

T210/T250/T260/T300

A manual operator is used to manually wind open or close high level or hard to reach window(s) or louvre(s). A single operator can be used to control individual or multiple openers.

Load

The correct operator will depend on the system load. Which will take into account the number of bends in the conduit and number of openers. Speak to our friendly experts to help find the correct operator for your project.

Openers

Several types of openers are available. The most suitable will depend on the application. Speak to our friendly experts to help find the best opener for you.
